DETAILED ACTION

Claims 1-23 are pending and subject to restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a method for cultivation cells at high densities, classified in class 435, subclass 243, for example.
- II. Claims 11-18 and 23, drawn to an apparatus for cultivation cells at high densities comprising cultivation chamber(s) with semipermeable separation from supply container(s) and product collection container(s) , classified in class 435, subclass 283.1+, for example.
- III. Claims 19-22, drawn to a method for generating products by culturing cells at high densities in an apparatus for cultivation cells at high densities, classified in class 435, subclass 41+, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III and Invention II are related as processes and apparatus for their practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, cells can be cultured at high densities in confluent monolayer on and/or an apparatus comprising cultivation chamber(s) with semipermeable separation from supply container(s) and product collection container(s) can be used for culturing cells at low densities and generating products from cells at low densities.

Inventions I and III are distinct because the claimed methods appear to encompass making distinct products such as cell mass of high density (group I) and various cellular product(s) separated from the cell mass of high density as presently claimed. Moreover, claims 19-21, in particular, provides for the use of apparatus, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one group is not necessarily required for the other groups, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1651

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
